Montreux  
SUISSE

The fully-licensed, private Biotonus Bon Port Clinic is one of Europe's foremost regeneration centers for the prevention and treatment of chronic and degenerative diseases due to stress, overworking and aging.

Patients are active, intelligent people, conscious of the negative effects of stress, fatigue, and aging on their bodies who wish to continue to enjoy physical and mental good health and well-being.

Claude Rossel, a world-famous authority on medical regeneration who has been practicing in Switzerland's longest practicing center in the field of cellular therapy, manages the clinic which is staffed by experienced physicians, nurses, technicians, dieticians and kinesiologists. Located in Montreux on the shore of Lake Geneva which is known for its pleasant climate, the clinic's accommodation and services are those of a Swiss luxury hotel.

Biotonus Bon Port Clinic is the clinic that offers the regeneration treatment appropriate to each individual patient's needs by applying the Aslan, or Filatov methods, or a combination of them.

Each patient at the Biotonus Bon Port Clinic is tested extensively. Based on the results of some 250 parameters, the medical team then decides which of three treatments or combinations of them would be the most beneficial to the patient.
